

ESCALATOR CONTROL PANEL

ANIMATION PROPERTIES:

Direction: Controls the direction of movement (up or down) of the characters and accordingly animates steps in a continuous loop.

Steps: The number of steps are controlled automatically by changing the rise of the escalator.

GEOMETRY PROPERTIES:

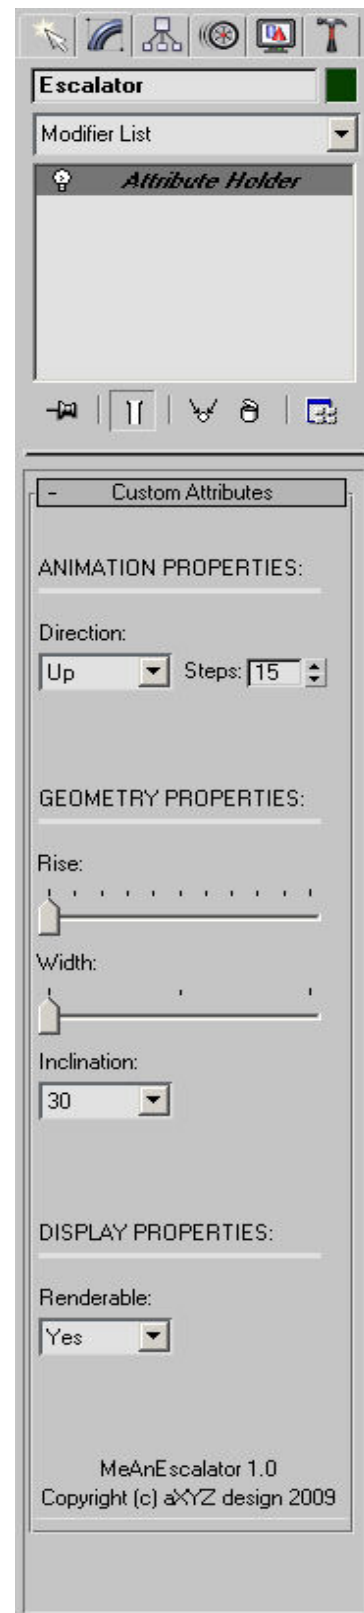

Rise: Sets the vertical rise and the number of steps in the escalator. Minimal and maximal rise values are: 1.4m to 6.2m

Width: Controls the width of the steps from 800mm to 1350mm.

Inclination: Sets the angle of inclination. There are two available standards, 30° and 35° degrees.

DISPLAY PROPERTIES:

Renderable: Turns on-off the visibility of the escalator geometry. The animated steps are always visible. This will allow you to use your own Escalator geometry.

TIPS:

To duplicate or create multiple copies of the escalator model do not use clone tool. Instead, repeat the merge operation as many times as copies you need.
